Hi-Pak

High Yield Grouts

Introduction

Si Powders high yield grouts offer high performance at an economical cost. The **Hi-Pak** range consists of 5 quality products.

Hi-Pak HY is the go-to grout for applications requiring a high strength, economical grout for filling large volumes. Designed to gel within 5-10 minutes at a Water:Powder ratio of 2.5:1 the grout develops strength within 2 hours.

Hi-Pak 2P is a two-part high volume grout for use in crib-bags or can crib supports. The two-part nature allows the product to be pumped separately in excess of 5000 m and requires only the addition of potable water.

Hi-Pak Foam is a high yield foaming grout, ideal for filling large volumes. Its low density ensures a foam factor of 3-5 is achievable and hence provides a cost-benefit. For customers requiring a higher strength foaming grout, **Hi-Pak StableFoam** is recommended.

Hi-Pak FPT200 is the premier strata and rock fill consolidation high yield grout. Designed for pumping distances up to 200 meters it features a fast set time and non-shrink characteristics.

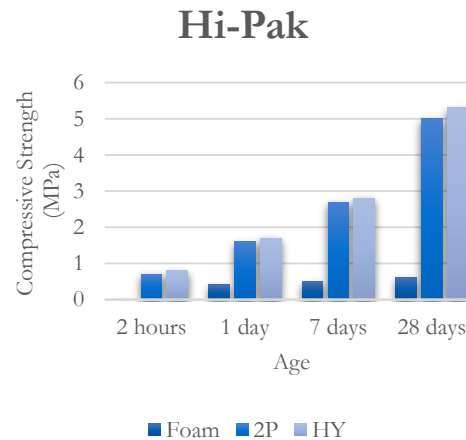

Performance

Si Powders **Hi-Pak** grouts can be used in a range applications including mining and construction.

Benefits of **Hi-Pak** grouts include:

- Predictable performance
- Excellent pumpability and fast discharge
- Decreased transportation costs
- Non-shrink
- Economical.

Following strict quality control procedures has enabled Si Powders to produce consistently high performing products that have been independently tested by industry leaders.

About Us

"We provide exceptional customer service and build long-term relationships."

Our highly skilled workforce is continually expanding, and our employees range from fabricators and operators to qualified chemists and engineers.

Our diverse vendor list ranges from multi-national mining and construction giants, large Australian contractors, to local batch plants and concreters.
