

The finest alternative

Find out about the market-leading injection cements in this brochure.

Micro Cements

Fast setting, fast cycle superfine cements.

Introduction

Si Powders is the only Australian manufacturer of **microcements** specifically designed for injection into rock and soils.

Utilising the latest manufacturing technologies, the cements exhibit extreme fineness allowing effective penetration into fine cracks and fine grained soils.

The rapid set times over traditional cements ensure that productivity is increased and costs are reduced during the application stage.

Si Powders **microcement** sizes range from a top size of D98 = 12 microns to D98 = 30 microns and customers might also request a different size for specific projects.

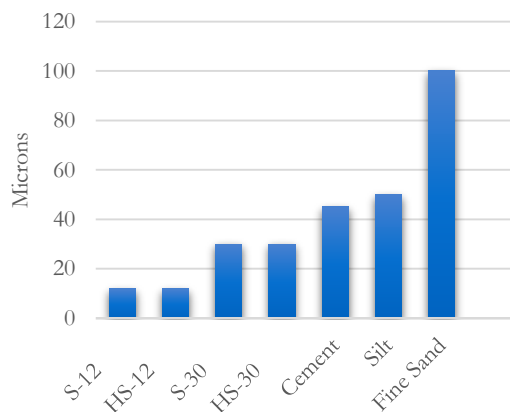

The S-Range is an Ordinary Portland based cement while the HS-Range provides increased resistance to chemical attacks and improved durability.

Performance

The **microcement** range allows customers to choose from four quality products suited for different applications. All products are non-toxic, work with a range of admixtures such as accelerators or superplasticizers and require only standard cement injection equipment.

Following strict quality control procedures has enabled Si Powders to produce a consistently high performing product that has been independently tested by injection specialists and abroad to high appraisal.

Typical Sizing

About Us

"We provide exceptional customer service and build long-term relationships."

Our highly skilled workforce is continually expanding, and our employees range from fabricators and operators to qualified chemists and engineers.

Our diverse vendor list ranges from multi-national mining and construction giants, large Australian contractors, to local batch plants and concreters.

Other Products

Si Powders provides a range of niche products including micro fine cements, high performance grouts, flooring products, repair mortars and more.

Si Powders can engineer custom solutions for projects; meeting and exceeding client expectations.
